IAP20 Rec'd PCT/PTO 22 JUN 2006

ATTACHMENT A

Claims 1 – 12: (Cancelled)

- 13. (New) An adduct comprising $MgCl_2$, ethanol and a Lewis base (LB) different from water, said adduct further comprising formula $MgCl_2 \bullet (EtOH)_n(LB)_p$, wherein n is from 2 to 6 and p is $p/(n+p) \le 0.1$.
- 14. (New) The adduct according to claim 13, wherein p is $p/(n+p) \le 0.0125$.
- 15. (New) The adduct according to claim 13, wherein the Lewis base is selected from ethers, esters, compounds of formula RX_m, and combinations thereof, wherein R is a hydrocarbon group comprising from 1 to 20 carbon atoms; X is -NH₂, -NHR or -OH; and m is 1 or higher.
- 16. (New) The adduct of claim 15, wherein RX_m is selected from the group consisting of methanol, propanol, isopropanol, n-butanol, sec-butanol, tert-butanol, pentanol, 2-methyl-1-pentanol, 2-ethyl-1-hexanol, phenol, 4-methyl-1-phenol, 2,6-dimethyl-1-phenol, cyclohexanol, cyclopentanol, ethylen glycol, propylen glycol ,4-butanediol, glycerine, mannitol, polyvinyl-alcohol, acetonitrile, ethylenediammine, 3-picoline, triethanolammine, triethylammine, and diisopropylammine.
- 17. (New) The adduct according to claim 13, comprising a fusion enthalpy lower than 100 J/g.
- 18. (New) A catalyst component for polymerizing at least one olefin comprising a product of a reaction between a transition metal compound and the adduct according to claim 13.
- 19. (New) The catalyst component according to claim 18, wherein the transition metal compound is selected from at least one titanium compound comprising formula $Ti(OR)_nX_{y-n}$, wherein n is between 0 and y; y is a valence of titanium; X is halogen; and R is an alkyl

radical comprising 1-8 carbon atoms, or COR, wherein R is a hydrocarbon group comprising from 1 to 20 carbon atoms.

- 20. (New) The catalyst component according to claim 19, wherein the titanium compound is selected from TiCl₃, TiCl₄, Ti(OBu)₄, Ti(OBu)₆Cl₂, Ti(OBu)₂Cl₂, and Ti(OBu)₃Cl.
- 21. (New) The catalyst component according to claim 18, wherein the reaction between the transition metal compound and the adduct is carried out in presence of an electron donor compound.
- 22. (New) The catalyst component according to claim 21, wherein the electron donor is selected from esters, ethers, amines, and ketones.
- 23. (New) A catalyst for polymerizing at least one olefin comprising a product of a reaction between the catalyst component according to claim 19, and an aluminum alkyl compound.
- 24. (New) A process for polymerizing at least one olefin of formula CH₂=CHR, wherein R is hydrogen or a hydrocarbon radical comprising 1-12 carbon atoms, carried out in presence of the catalyst according to claim 23.
